

Catch-Cans

It's time you caught on!

What is a Catch-Can

A Catch-Can is the most important engine modification you can make to keep like-new performance and efficiency.

The Catch-Can filters blow-by emissions from the crankcase – ensuring the recycled gas is clean before it enters the intake system.

Why you need a Catch-Can

Because without a Catch-Can turbo diesels can quickly build-up harmful carbon deposits around the engine induction and intercooler pipes – causing gradual loss of power and efficiency.

Typical carbon build-ups on air intake system of turbo diesel without Catch-Can protection

Direction Plus™ ProVent® Kits – your complete solution!

Save time and money with everything you need in one package at SMS.

These Kits include the original ProVent® unit ready to mount between your crankcase and PCV – complete with bracket, hoses, clamps, nuts, bolts and easy fitment instructions.

Kits now in stock at competitive prices to suit most popular 4WD vehicles including:

- Toyota Hilux** 3.0 turbo diesel
- Ford Ranger** 2.2 and 3.2 turbo diesel
- Mazda BT50** 2.2 and 3.2 turbo diesel

KEY

- | | |
|------------------------------------|-----------------------|
| 1 Inlet pipe (crankcase fumes) | 5 Over-pressure valve |
| 2 Outlet pipe (clean gas to ECR) | 6 Pressure regulator |
| 3 Filter inlet swirl chamber | 7 Waste drain |
| 4 Filter outer and waste reservoir | |

ProVent® – proven technology

Developed by renowned Mann+Hummel in Germany, ProVent® Catch-Cans are universally accepted to provide highly effective filtration of re-circulated crankcase fumes – separating harmful oil and soot particles that would otherwise build-up on your EGR intake and intercooler pipes.
